Human Performance Perceptual Load Attention			
20. ABSTRACT (Continue on reverse side if necessary and identify by block number)			
This index classifies the studies which appear in: <u>An Annotated Bibliography of the Literature Dealing with the Physiological Correlates of Cognitive Performance.</u> (Carriero, et. al., 1978). The studies are referenced under approximately 400 index terms.			

ACKNOWLEDGMENTS

The authors wish to express their appreciation to Connie Confer, Jeanne Tezai, Doris S. Eanes and Lilly M. Williams who performed the difficult task of typing a huge array of numerical data with great accuracy and efficiency.

# Index for an Annotated Bibliography of the Literature Dealing with the Physiological Correlates of Cognitive Performance

## Introduction

This index was prepared as a companion to An Annotated Bibliography of the Literature Dealing with the Physiological Correlates of Cognitive Performance (Carriero et al., 1978).

The following information is presented to enable the user to employ the index with maximum efficiency.

## User Guidelines

1. The terms that appear in the index were selected in the main, from the abstracts themselves and, as a consequence, there is some overlap in the index categories which reflects the preferences of the various authors. For example, there is one category labelled, "Brain Electrical Activity", and another one labelled, "Electrocortical Activity". These categories refer to much the same phenomenon in many instances but, nevertheless, we have retained both of them in an effort to preserve whatever distinction exists between them and to facilitate the indexing process. Thus, to insure complete coverage of any given concept, the user should search the index for similar categories.

2. General categories (e.g. "Contingent Negative Variation") do not necessarily include all articles cited in a subordinate category (e.g. "CNV and Motivation"). As a rule, the appearance of an item in both a general and a subordinate category implies that the article deals with material over and above that specified in the subordinate category.

3. Articles are generally classified in the most specific applicable categories. For example, an article dealing exclusively with alpha rhythm will appear only in the category, "Alpha Activity", and would not be found under "Electroencephalogram". As a consequence, if a user is interested in a broad area, such as all electroencephalographic studies, she/he should search not only the "Electroencephalogram" category and its associated entries, but also the specific EEG bandwidth categories such as "Alpha Activity", "Beta Activity", etc.

4. A few categories of a very broad nature were referenced only when specifically used by the authors and, thus, are not all-inclusive. Examples of such categories are: "Auditory Task/Stimuli", "Performance", and "Visual Task/Stimuli."

5. Classification of articles was based solely on the information contained in their titles and abstracts. Thus the completeness of the index is limited by the completeness of these two information sources.

6. Review articles are indicated by the letter "R" in parentheses following their identification numbers.

7. The numbers that appear in each category refer to the article identification number and not to the page on which the article appears.

The authors would appreciate any feedback (both positive and negative) as to the utility of this document and its companion volume, the Bibliography itself.
